Filtr ciemnozielony Explore Scientific N58A 1,25"

Cena	64,95 zł
Numer katalogowy	73778
Kod producenta	73778
Kod EAN	0753215766390
Producent	Explore Scientific

Opis produktu

Filtr ciemnozielony Explore Scientific N58A 1,25" Do prowadzenia szczegółowych obserwacji planet. Średnica: 1,25" The green filter is to increase the contrasts enormously between the red and the blue regions of the cloud structures on the gas planets Jupiter and Saturn. Seeing our Earth Moon through the green filter, the contrasts of each „Strahlenkrater” become clearly more visible. This filter should be used at an aperture of 8". Color Filters darken the light slightly, that reaches the eye or the sensor of the camera. This eliminates for instance stronger transitions. The result is that your picture turns out with more contrast which automatically shows more details. Features: Made from high-quality optical glass Filter glass is absolutely parallel All optical surfaces have anti reflex coatings Filter housing from black anodized aluminum Filter threads on both ends (female/male) Multiple filters usage is possible The kit includes: Color filter Protection-case Specifications: Type: color filter Optics material: optical glass Optics coating: multicoated, anti-reflective Body: aluminium Eyepiece barrel diameter: 1,25"(31.7mm)
