Opis produktu

Levenhuk Strike 900 PRO is the entry-level model of the Strike PRO series. It has a high-quality achromatic objective lens that provides bright and sharp images with minimal chromatic aberrations. This is a very compact and lightweight model and, with the telescope case included in its advanced kit, can be easily transported when you travel. You can observe stars of up to 11.8 stellar magnitude with this telescope thanks to its 90-mm (3.5-in) objective lens, which means that it can be used for planetary observations, as well as study of deep-sky objects. With Levenhuk Strike 900 PRO you can see all the wonders of our universe, from Solar System planets to deep-sky objects.
